

NatHERS Principles for Ratings in Regulation Mode (Version 1.1 - 2013)

Addendum 1.2013: The Treatment of Waffle Pods

1. Modelling Waffle Pods

1.1 The following principle should be followed by assessors in all accredited software products when modelling waffle pods:

For waffle pods of 300 and 375 thickness – use R1.0

For waffle pods of 175 and 225 thickness – use R0.5

1.2 Assessors can only use these values when the thickness of the pod is shown on the plans and the direction to use pods is clearly notated.

1.3 Where the thickness of the pod is **not** indicated, but their use is – the lower R-value (i.e. R0.5) should always be used as the default value.
